

Cybersecurity Services

For Security Transformation in a Rapidly Evolving Technological Landscape

Key Benefits

We've designed our security auditing and assessment services to deliver clear, actionable results that you can immediately use to hone your security strategy, address critical vulnerabilities, improve day-to-day operations, and sharpen your training.

▶ **Refine Your Strategy**

Our fact-based assessments provide executive-level insights into the effectiveness of current systems, people and processes. Detailed recommendations enable you to refine your strategy and bolster your immediate and long-term defensive posture.

▶ **Address Complex Vulnerabilities**

Use our services to identify and understand complex vulnerabilities that can often go undetected for months, even years. Using our detailed recommendations, you can rapidly mitigate these vulnerabilities before they are exploited.

▶ **Improve Operations**

Through our reports and consulting services, we can help you develop a clearer view of the equipment, devices, applications, people, and processes that make up your network ecosystem, no matter how large or complex it may be. We also provide guidance on how you can improve day-to-day operations in order to strengthen your defensive capabilities as well as improving operational efficiency.

▶ **Boost Training Success**

We complement our assessment of your security team's ability to prevent, detect, analyze and respond to incidents with pragmatic advice on what type of training and programs could best set them on a path to continuous improvement.

Take your Security to the Highest Level

Combining excellence, high quality and innovation, Enea provides cybersecurity services dedicated to discovering, monitoring and improving the safety levels of your infrastructure.

Experience, Expertise, Quality and Innovation

With more than 50 years in cutting edge technology, we have earned a reputation for quality and innovation. We use all our experience in the service of our clients, helping them achieve security transformation in a rapidly evolving technological landscape.

A Full Range of Services

We help customers to protect their infrastructure by taking their IT operations to the highest possible security level. We accompany them through every step, from strategy to tactical decisions and operational management. We deliver a full range of dedicated services to evaluate existing security levels, pinpoint vulnerabilities, alleviate risks and test infrastructure to ensure the strongest possible defenses.

Our certified team of experts uses the most advanced industry methodologies and will address even the most complex security challenges to ensure that our customers' critical systems are protected from both existing and emerging threats.

SECURITY AUDITING

A complete procedure that identifies, evaluates and provides fixes of all the security flaws of a system, application, or mixed, complex environment.

- ▶ Executive briefing
- ▶ Security gap analysis
- ▶ Observations and recommendations
- ▶ Actionable improvement plan
- ▶ Security program roadmap
- ▶ Network health check

VULNERABILITY ASSESSMENT

A cost-effective, comprehensive evaluation of a system for exposed vulnerabilities without their direct exploitation.

- ▶ Analysis of endpoint, network, email and log data
- ▶ Identification of vulnerabilities and weak configurations
- ▶ Report of findings, executive summary
- ▶ Plan of recommended fixes and follow-through guidelines

PENETRATION TESTING

Identifying, evaluating and exploiting flaws in a system, network, application, or mixed environment. This testing determines whether your critical data is actually at risk and enables you to address complex security vulnerabilities before an attacker exploits them. The service includes recommended mitigation to all its findings.

- ▶ High-level executive summary report
- ▶ Technical documentation that allows you to replicate our findings
- ▶ Fact-based risk analysis to validate results
- ▶ Tactical recommendations for immediate improvement
- ▶ Strategic recommendations for longer-term improvement

RED TEAM OPERATIONS

A test of the organization's defense mechanisms is a procedure that simulates as closely as possible a real-world attack against an infrastructure, system, network or entire organization. The service includes strategic recommendations for attack response.

- ▶ A high-level executive summary of the Red Team Assessment
- ▶ A detailed report describing actions taken during the assessment, as well as a report of all vulnerabilities uncovered
- ▶ Fact-based risk analysis detailing the relevance of each vulnerability with respect to your environment
- ▶ Strategic recommendations for longer-term improvement

METHODOLOGIES

We use the most advanced industry methodologies to address even the most complex security challenges. They include:

- ▶ Open Source Security Testing Methodology Manual ("OSSTMM")
- ▶ NIST 800-115
- ▶ OWASP Testing Guide
- ▶ CREST Penetration Testing Guide

TEAM CERTIFICATIONS

We have a dedicated and experienced team of cybersecurity experts with certified skills to ensure you receive the best possible quality of service.

Enea is a world-leading supplier of innovative software components for telecommunications and cybersecurity. Focus areas are cloud-native, 5G-ready products for mobile core, network virtualization, and traffic intelligence. More than 3 billion people rely on Enea technologies in their daily lives.
